## About me

---

Specialized in automation and generative AI, with hands-on experience building and operating production-grade systems. I design and deploy conversational voice and chat solutions, API integrations, and real-time systems with a strong focus on business impact. I work with full end-to-end ownership, combining technical judgment, product vision, and a strong commitment to quality and scalability.

## Experience

---

### Head of AI Bot Development | Generative AI & Automation

February 2025 / In progress

Mintt Cloud Technology, Madrid

- Lead the design, development, and operation of generative AI solutions in production environments.
- Build and integrate conversational voice and chat systems, automations, and workflows connected to enterprise APIs and platforms.
- Own the full technical lifecycle end-to-end: architecture, implementation, deployment, maintenance, and evolution.
- Work cross-functionally with sales, support, and operations to translate business needs into scalable, maintainable technical solutions.

### AI Bot Developer | Generative AI & Automation

July 2024 / January 2025

Mintt Cloud Technology, Madrid

- Designed and implemented generative AI solutions focused on process automation and user experience improvement.
- Built and integrated conversational bots and automated workflows connected to internal systems and external services via APIs.
- Collaborated closely with both technical and business teams in continuous delivery environments.

### Full-Stack Web Developer

February 2024 / June 2024

Melit Technologies, S.L., Madrid

- Developed full-stack features for web applications across both frontend and backend.
- Implemented solutions focused on performance, maintainability, and user experience.
- Integrated external services and contributed to iterative delivery and continuous improvement cycles.

### Web Developer (Intern)

September 2023 / December 2023

Vortex Dimensión Digital, Madrid

- Contributed to the development of a production web platform (Feria del Libro), working on real features used by end users.
- Worked in a team environment following development best practices and iterative delivery.
- Strengthened programming foundations and gained hands-on professional experience.
